

10 things you need to know to be a successful fMRI researcher

Peter A. Bandettini, Ph.D

Unit on Functional Imaging Methods
&
3T Neuroimaging Core Facility

Laboratory of Brain and Cognition
National Institute of Mental Health

The 10 Things

1. The Scanning Technique (MRI)
2. Necessary Technical skills and/or People
3. Imaging and Processing steps
4. Types of Functional Contrast
5. Details of Functional Contrast
6. Types of Artifacts
7. Methods to Bypass or Remove Artifacts
8. Types of Applications
9. Limits of Techniques and Applications
10. Some “rules of thumb”

The 10 Things

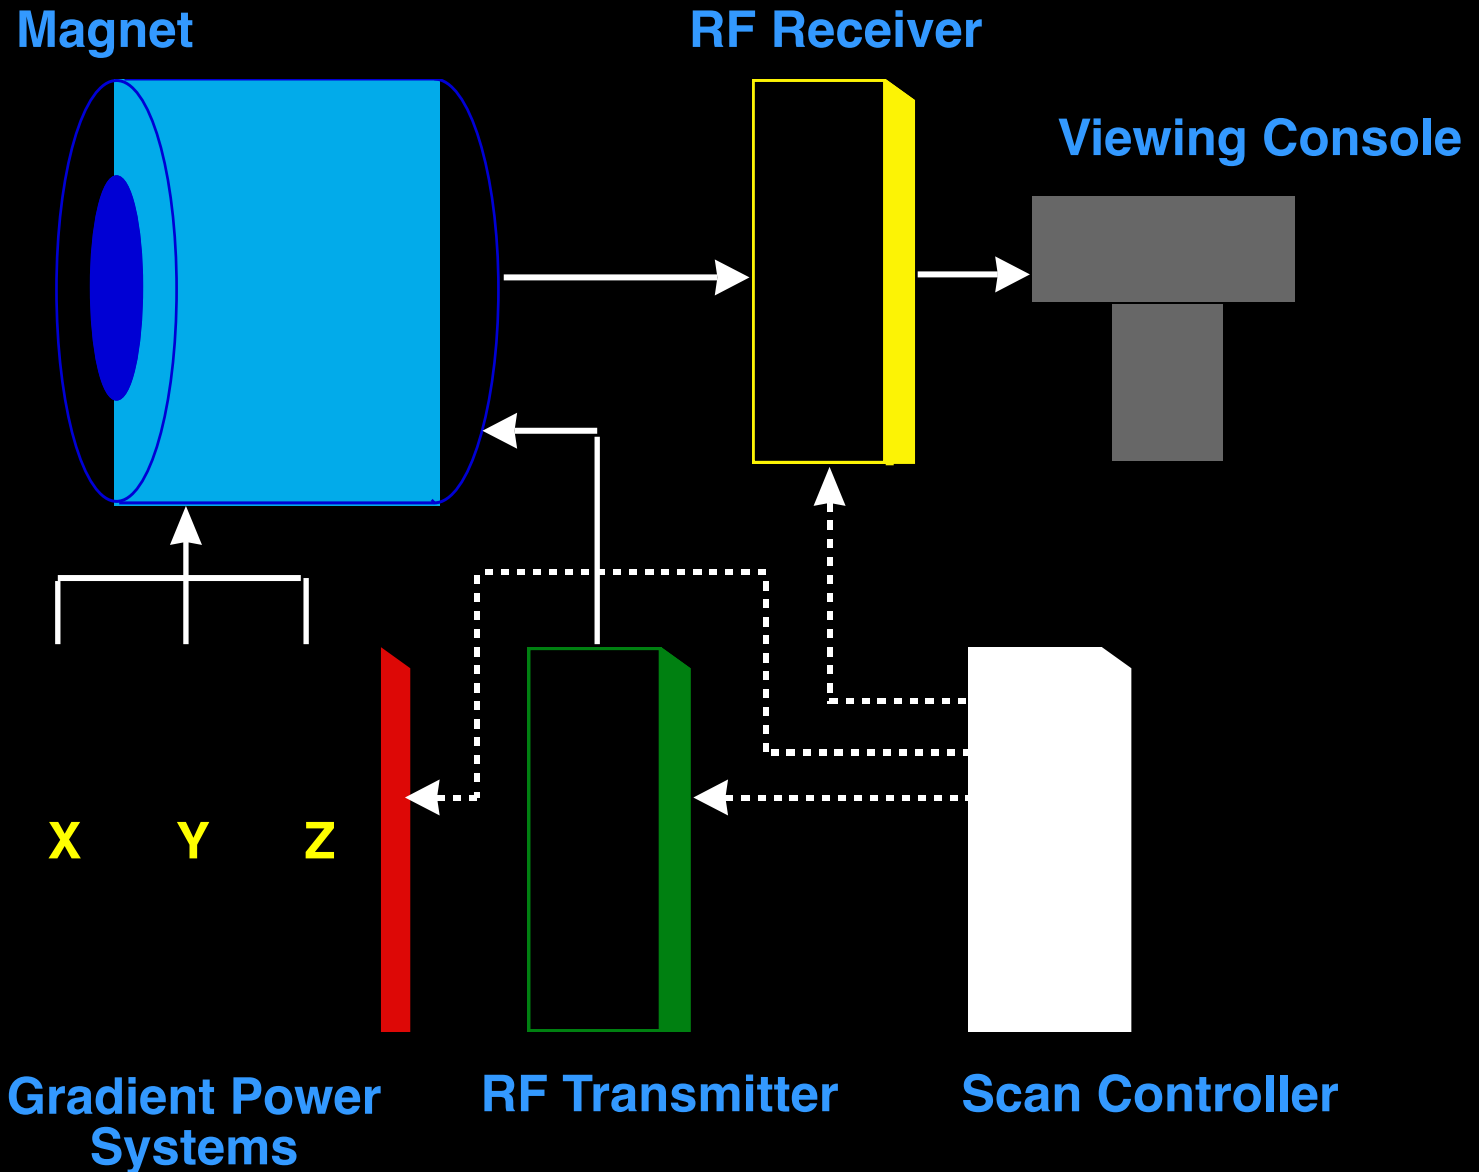

1. The Scanning Technique (MRI)

2. Necessary Technical skills and/or People
3. Imaging and Processing steps
4. Types of Functional Contrast
5. Details of Functional Contrast
6. Types of Artifacts
7. Methods to Bypass or Remove Artifacts
8. Types of Applications
9. Limits of Techniques and Applications
10. Some “rules of thumb”

General Electric 3 Tesla Scanner

Imaging System Components

To perform an MRI Experiment:

1. Place patient in magnet
2. Send in a radio frequency (RF) wave
3. Turn off the RF wave.
4. Patients emits a signal
5. Image is reconstructed

The Concept of Contrast (or Weighting)

- *Contrast* = difference in RF signals — emitted by water protons — between different tissues
- Example: gray-white contrast is possible because T1 is different between these two types of tissue

Anatomic

Functional

Echo-Planar Imaging

Single Shot Imaging

EPI Readout Window

≈ 20 to 40 ms

Imaging System Components

1991-1992

1992-1999

2 G/cm, 350 T/m/s

4 G/cm, 150 T/m/s

10 G/cm, 1000 T/m/s

The use of fMRI to Investigate Brain Function

Where?

When?

How much?

How to get the brain to do what we want it to do in the context of an fMRI experiment?

The 10 Things

1. The Scanning Technique (MRI)
- 2. Necessary Technical skills and/or People**
3. Imaging and Processing steps
4. Types of Functional Contrast
5. Details of Functional Contrast
6. Types of Artifacts
7. Methods to Bypass or Remove Artifacts
8. Types of Applications
9. Limits of Techniques and Applications
10. Some “rules of thumb”

Minimum Staff

Physicist (or Engineer)
Computer Specialist
Scanning Technologist
Researcher and team

- paradigm design
- paradigm construction
- processing
- interpretation

The 10 Things

1. The Scanning Technique (MRI)
2. Necessary Technical skills and/or People
- 3. Imaging and Processing steps**
4. Types of Functional Contrast
5. Details of Functional Contrast
6. Types of Artifacts
7. Methods to Bypass or Remove Artifacts
8. Types of Applications
9. Limits of Techniques and Applications
10. Some “rules of thumb”

Imaging and Processing Steps

- Shimming
- Localizer
- High resolution anatomical image
- Functional time series collection
- Image reconstruction
- Time series analysis
 - Registration
 - Correlation, Regression, t-test, etc..
 - Statistical threshold
 - Display
 - Image normalization
 - Multiple subject comparison
- Interpretation

The 10 Things

1. The Scanning Technique (MRI)
2. Necessary Technical skills and/or People
3. Imaging and Processing steps
- 4. Types of Functional Contrast**
5. Details of Functional Contrast
6. Types of Artifacts
7. Methods to Bypass or Remove Artifacts
8. Types of Applications
9. Limits of Techniques and Applications
10. Some “rules of thumb”

A Primary Challenge:

...to make progressively more precise inferences using fMRI without making too many assumptions about non-neuronal physiologic factors.

Contrast in Functional MRI

- **Blood Volume**

- Contrast agent injection and time series collection of T2* or T2 - weighted images

- **BOLD**

- Time series collection of T2* or T2 - weighted images

- **Perfusion**

- T1 weighting
- Arterial spin labeling

- **CMRO₂**

- BOLD and Perfusion w/
Normalization to Global Perfusion Change

4. Types of Functional Contrast
5. Details of Functional Contrast
- 6. Types of Artifacts**
7. Methods to Bypass or Remove Artifacts
8. Types of Applications
9. Limits of Techniques and Applications
10. Some “rules of thumb”

Types of Artifacts & Nature of Noise

- Drift (scanner and/or subject)
- Stimulus correlated motion
- Cardiac, respiratory motion
- Bo changes (mouth movement, etc..)
- Eye movement
- Equipment in scanner room (RF interference)
- Scanner spiking

Higher Signal to Noise **in a single image** does not necessarily translate to higher Signal to Noise **over time**.

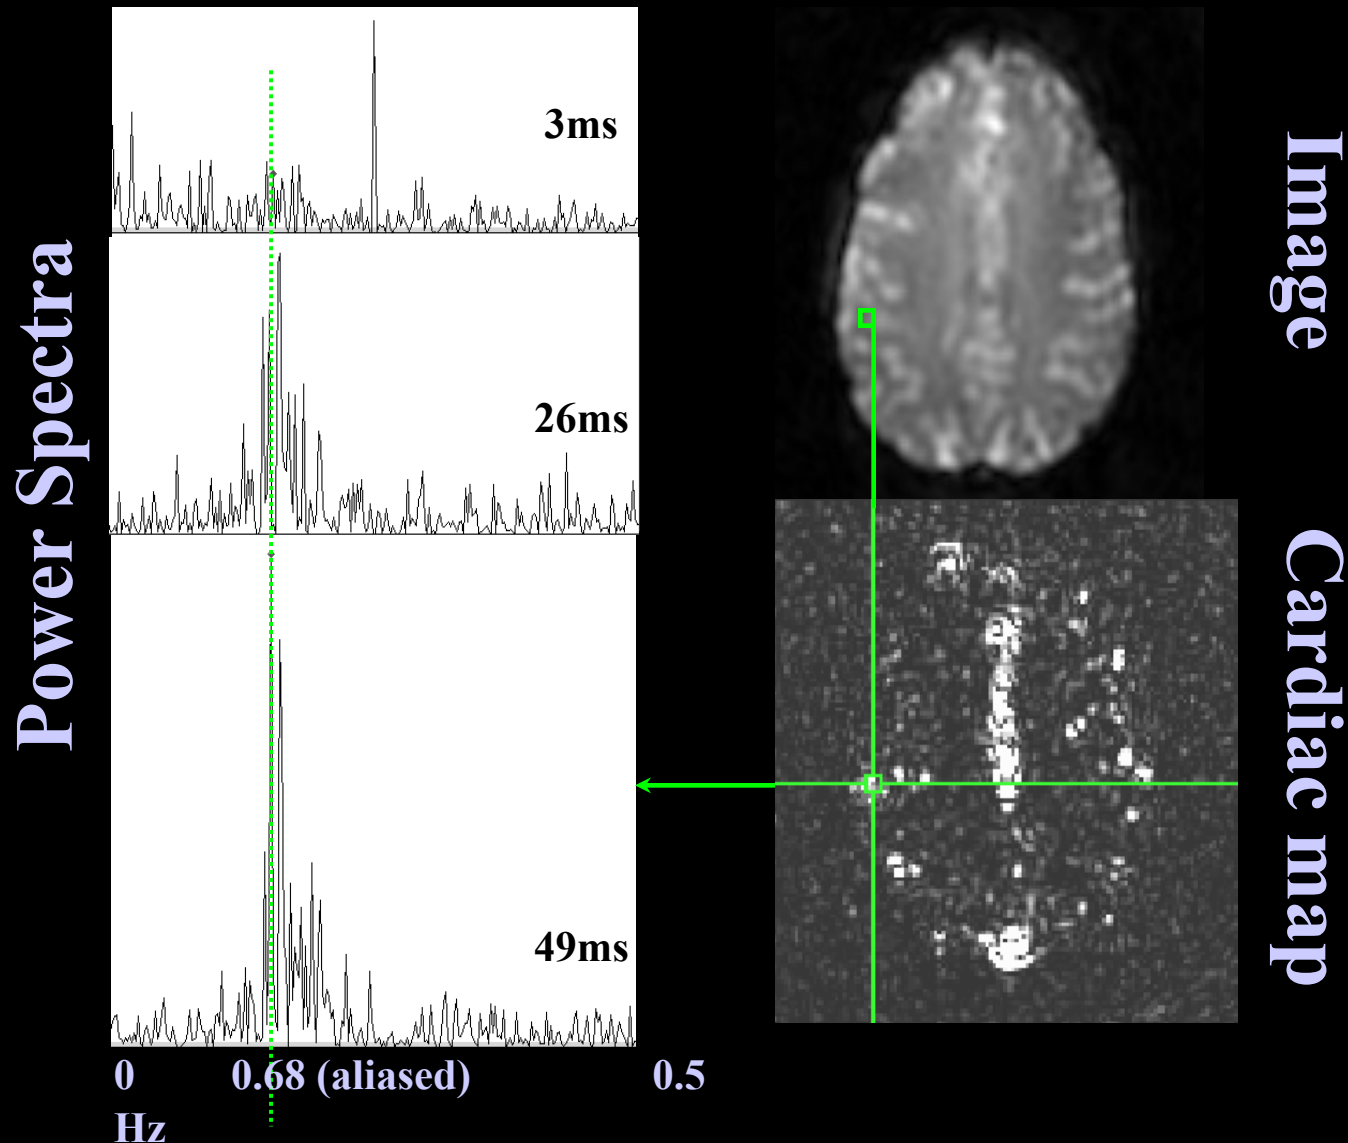

Temporal vs. Spatial SNR- 3T

0.25 Hz Breathing at 3T

0.68 Hz Cardiac rate at 3T

Temporal S/N vs. Image S/N

Motion-Decoupled fMRI: Functional MRI during of overt word production

“block-trial” paradigm

Motion induced signal changes resemble functional (BOLD) signal changes

“single-trial” paradigm

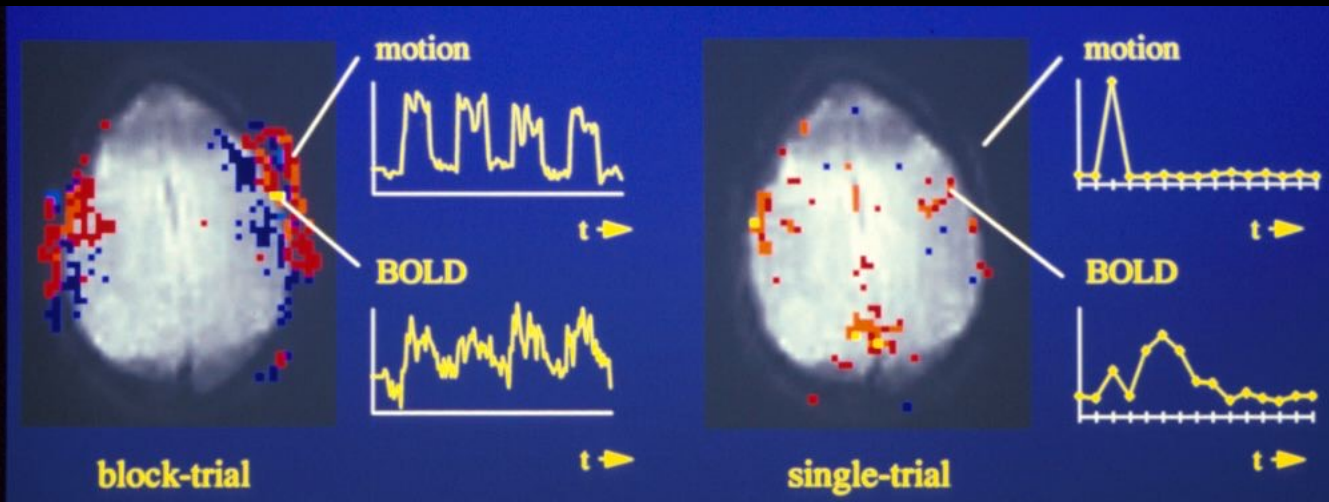

Motion induced and BOLD signal changes are separated in time

R.M. Birn, et al.

Tongue Movement

Jaw Clenching

Constant ISI

Speaking - ER-fMRI

Swallowing - Event-Related

Neuronal Activation Input Strategies

1. Block Design

2. Frequency Encoding

3. Phase Encoding

4. Single Event

5. Orthogonal Block Design

6. Free Behavior Design.

Example of a Set of Orthogonal Contrasts for Multiple Regression

Neuronal Activation Input Strategies

1. Block Design

2. Frequency Encoding

3. Phase Encoding

4. Single Event

5. Orthogonal Block Design

6. Free Behavior Design.

Free Behavior Design

Use a continuous measure as a reference function:

- Task performance
- Skin Conductance
- Heart, respiration rate..
- Eye position
- EEG

The Skin Conductance Response (SCR)

Skin Conductance Dynamics

- Boucsein, Wolfram (1992). *Electrodermal Activity*. Plenum Press, NY
- Venables, Peter, (1991). *Autonomic Activity ANYAS 620:191-207.*

Brain activity correlated with SCR during “Rest”
